

Payhembury Weather www.payhembury-weather.co.uk

Rainfall: The floods on 7th July with 37mm falling in one day resulted in July's rainfall being twice the normal average and August is continuing this wet theme. Not in the figures below but 26mm fell on 15 August in one morning just in time for Beautiful Days! so August will be another very wet month. The Honiton area experienced a thunderstorm on the evening of 11 August.

Temperatures: It has continued to be warmer than average but no really long hot periods so it doesn't feel as if we have had a summer. The south east of England appears to be getting it much warmer than here.

Sunshine: July was sunnier than June but May is still easily the sunniest month this year. July's sunshine was similar to last year.

Weather elsewhere: The drought and record breaking warm temperatures in the S.E. USA continues with higher food prices likely to affect us all. In the Arctic the sea ice extent during the first two weeks of August continue to track below the 2007 record low daily ice extents with about five weeks still remaining in the melt season.

Payhembury Monthly Temperatures degC

Jul/Aug 12	1960-90 Climate	Measured Averages	Warmer or colder than average?
