

Payhembury Weather

www.payhembury-weather.co.uk

Rainfall: In June we only had 7 mm of rain mostly on the 1st and since then with the exception of 1st July we have had very little rain and nothing in the forecast through to late July. Parts of England are already being advised of looming hosepipe bans as water butts begin to empty.

Temperatures: June and July have been well above average temperature with a temperature of 32.5 degC reached on 8 July. I recorded 33.1 degC here in July 2013 so its not a record! In July/August 2013 we had 31 contiguous days above 20 degC, so far this June/July we have had 25 contiguous days.

Weather elsewhere: Record high temperatures have been set across much of the world this July as a prolonged heatwave intensifies concerns about climate change. Power shortages were experienced in California as record heat forced a surge of demand for air conditioners. Algeria has experienced the hottest temperature ever reliably registered in Africa. An estimated 70 people died as the result of sweltering temperatures that hit Canada's Quebec province. Japan in contrast has been experiencing devastating floods and landslides with estimated fatalities of 85.

Payhembury Monthly Temperatures degC

Jun/Jul 18 (2 weeks)	1960-90 Climate	Measured Averages	Warmer or colder than average?
Max Temp	18.4/20.4	23.5/27.0	Much Warmer
